

Energy Legislation Compliance Services

Ensuring compliance and best value from all compulsory & voluntary schemes.

Emissions Monitoring and Trading Schemes

JRP can assist you in all aspects of all emissions monitoring and trading schemes to make sure that you are compliant, but also **that you get best value for your organisation**. For one client, we were able to achieve £1 million annual savings from negotiated CCA emissions.

We can help you determine if the scheme applies to you, apply for relevant permits, report within the scheme and maintain the associated evidence pack and agreements with relevant sector associations in accordance with the scheme guidance and regulations.

This includes, but is not limited to:

- Data collation and submission to the relevant body
- Online evidence pack generation and population with 24/7 access
- Incorporating required scheme activities in company procedures
- Responding to requests and queries from the regulator
- Operation of registry accounts
- Planning and forecasting emissions to minimise scheme costs and to claim rebates and allowances where appropriate
- Providing continuous updates as relevant information becomes available

EU ETS (EU Emissions Trading System)

This scheme is mandatory if your business has more than 20MW thermal capacity installed at a one site.

CCA (Climate Change Agreement)

CCA is a voluntary UK scheme which applies if a site or part of a site has an IPPC (Integrated Pollution

Prevention and Control) permit or conducts one of the processes identified by the particular sector association. The benefit of being part of CCA is the reduction in Climate Change Levy (CCL) which is applied to both electricity and gas invoices provided you meet the energy reduction targets specified in the agreement. CCA covers electricity, gas and oil but CCL is only applied to electricity and gas.

CRC (Carbon Reduction Commitment Energy Efficiency Scheme)

This is a mandatory UK scheme which applies to businesses that consume more than 6000 MWh of electricity per year. If you qualify you must report all electricity and gas usage for the whole UK organisation.

CHPQA (Quality Assurance for Combined Heat and Power)

A voluntary scheme run by Department of Energy and Climate Change (DECC) and rewards good quality CHP by allowing participants to claim Climate Change Levy (CCL) exemption and claim enhanced capital allowances (ECAs).

GHG (Greenhouse Gas) Emissions Reporting

A requirement of the Climate Change Act 2008 is that all organisations listed on the FTSE100 are required to report on their GHG emissions in the company's directors' report.

If you need help compiling your data, or understanding your obligations, please call us on 0800 6127 567, email info@jrpsolutions.com
