Energy Activator®

Purpose built dynamic, user-friendly, web-based project management and reporting software.

Energy Activator® enables the capture of energy reduction ideas and facilitates the effective management of a portfolio of energy reduction projects that will significantly improve an organisation's cost, environmental and operational performance.

How does it work?

Improvement ideas and opportunities are uploaded to a database where they are stored and evaluated in terms of their cost, energy and environmental impact and then prioritised accordingly. Individual improvement opportunities may be grouped together to form unique projects. Selected improvement opportunities are subjected to a rigorous gated process requiring sign-off at each stage before it can then pass through to the next stage of assessment and approval.

Energy Activator® can be accessed from anywhere in the world and the visibility of the stored information can be restricted to suit the structure and specific needs of the business.

As an integrated, real-time system, the management reports generated by Energy Activator® provide valuable operational, commercial and environmental information that help to inform capital planning, budget forecasting and environmental reporting.

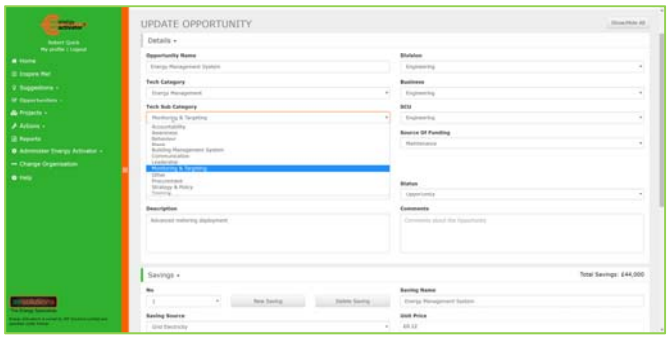
The system can be customised to suit your requirements and branded with your identity throughout.

The benefits:

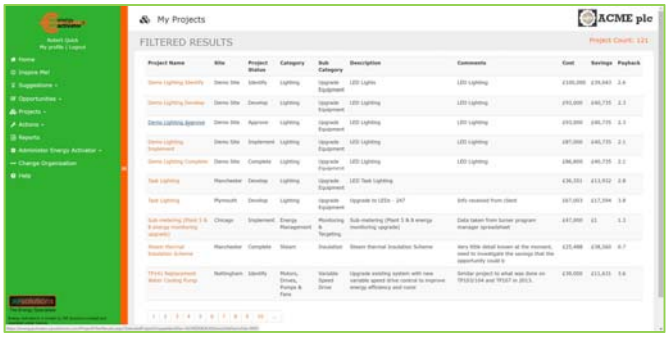
- saves time, money and resources
- unlimited number of users
- live reporting of project status
- greater stakeholder engagement
- consistency of process and reporting
- global access and transparency of data
- supports strategic and tactical decision-making
- inspires new energy ideas
- captures all energy ideas and opportunities
- aids prioritisation and selection of investment projects
- gated project governance process provides assurance to stakeholders
- automated and bespoke reports
- supports ISO 50001 certification

Energy Activator® offers considerable benefits over existing products and methodologies and can be licensed from JRP who will provide appropriate training and support.

Sample screenshots:



Energy saving ideas are easily and quickly added and move through a gated process to achieve maximum buy in and sign off.



Projects can be filtered and reported on by a wide range of factors to inform capital planning, budget forecasting and environmental reporting.
