

Chancellor misses golden opportunity to push carbon agenda

The Chancellor, George Osborne delivered his Budget Statement to the House declaring that "Britain is growing, creating jobs and paying its way" and stating that "Britain's manufacturing output has grown more than four-and-a-half times faster than it did in the entire decade before the crisis."

A very positive statement which preceded some election winning promises, many designed to win the grey vote, but possibly not the green one!

ESOS – What Now?

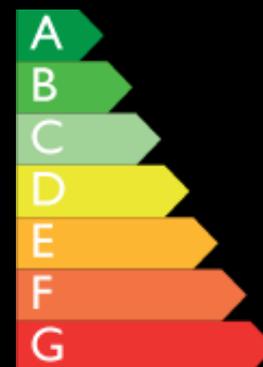

Whether you view the Government's Energy Saving Opportunities Scheme (ESOS) as an unnecessary cost burden or a catalyst for change in how your business manages its energy the key deliverable will be a list of improvement opportunities.

The question is what to do with those opportunities?

"We cannot be complacent about energy", warns energy expert.

The news last week that global carbon emissions remained stable last year even though the world's population has increased by 1 billion people since 2000 is a

though the economy grew, was welcomed in all quarters. "But," says Jes Rutter, JRP Managing Director, Jes Rutter, "this is not a signal for us all to take our foot off the energy efficiency pedal."

New Energy Project Management Software saves costs, time and resources

With increasing legislative, ethical and stakeholder pressure to implement energy savings projects, many organisations are struggling to manage the number and complexity of projects they have to deliver. Is your energy project management software up to the job?

Global access, transparency of data, automatic report generation and sorting of projects by multiple criteria are just some of the features of our purpose-built, newly launched web-based software tool, [Energy Activator®](#). Watch our brief introductory video [here](#).

Why train staff in energy efficiency?

If your organisation takes energy efficiency seriously (and if it doesn't, it should!), providing energy efficiency training to your staff is essential, and here are 5 good reasons why: [Read more →](#)

Energy efficiencies to save UK £4bn according to report

DECC's energy efficiency and demand side policies were estimated to save the UK £4billion on its energy and transport bills in 2014 and a total of £18billion on energy and transport bills in 2020, according to the Energy Efficiency Statistical Summary 2015 issued by the Department for Energy and Climate Change.

Whilst the devastating consequences of climate change continue to be far-reaching and long-lasting, the report contains some glimmers of optimism that the UK is at least on a path towards more sustainable energy use.

What's putting you off ISO 50001 Certification?

Implementing the energy management standard ISO 50001 makes good business sense as part of a structured and coordinated approach to reducing energy use but often organisations are deterred by their lack of knowledge and the thought of burdensome procedures and paperwork. A new software toolkit purpose-designed by JRP for their clients' use is helping to simplify the process.

Driving fuel reductions!

We are continually looking to motor manufacturers to deliver more fuel efficient cars but, by incorporating efficient driving techniques, the average driver can improve their mpg by up to 15% which on average equates to fuel savings of up to £230 and a reduction in carbon dioxide of 400kgCO₂ a year.
